Professional Summary

Proactive **Infrastructure Support Engineer** with hands-on experience maintaining and supporting IT infrastructure, facility systems, and field-based technical operations across multiple sites. Skilled in diagnosing and resolving hardware, software, and network issues in enterprise environments, with a strong track record of ensuring system uptime and operational reliability. Experienced in coordinating with contractors, vendors, and internal teams to execute infrastructure maintenance and upgrades. Proficient in technical documentation, safety compliance, and ITIL-aligned incident management. Adept at working independently in dynamic environments while maintaining clear stakeholder communication. Seeking to contribute technical expertise and a collaborative mindset to the Bureau of Meteorology's Observing Systems & Operations team.

Core Competencies

- **Infrastructure Systems:** Hardware deployment, UPS systems, power system monitoring, facility equipment maintenance, site inspections
- **IT Systems:** Windows Server, Active Directory, Linux (Ubuntu), endpoint configuration, imaging, device management
- **Cloud & Management:** Microsoft 365, Intune, Azure VMs, Microsoft Defender, backup verification, patch management
- **Networking:** TCP/IP, DNS, DHCP, VPN troubleshooting, switch/router configuration
- **Operations:** ITIL incident/service request handling, vendor/contractor liaison, procurement support, risk assessment contributions
- **Documentation:** Technical runbooks, maintenance guides, asset records, site reports, operational procedures
- **Tools & Scripting:** Python, PowerShell, Zendesk, Jira, Git, Docker

Professional Experience

Support Engineer (Casual / Contract)

Nov 2025 – Present

Axiom Technologies — Launceston, TAS (On-site)

- Deliver on-site infrastructure support across enterprise and retail environments, ensuring prompt resolution of hardware, software, and network issues to maintain operational continuity.
- Troubleshoot and maintain diverse technical systems including desktops, laptops, printers, POS/EFTPOS devices, mobile units, UPS systems, and networking equipment.
- Perform scheduled site inspections, break-fix repairs, and preventive maintenance to ensure infrastructure reliability and uptime.
- Coordinate with field staff, vendors, and contractors to execute maintenance works and infrastructure upgrades efficiently.
- Support mission-critical systems including parcel lodgement infrastructure, backend servers, and facility-based IT equipment.
- Maintain accurate documentation in ticketing systems (Zendesk), including incident records, asset information, and site reports.
- Respond to incidents and service requests in alignment with ITIL best practices, maintaining clear communication with stakeholders throughout resolution.

Systems Engineer & IT Support

Feb 2025 – Nov 2025

Foresight Analytics — Bella Vista, NSW (Remote / On-site)

- Managed Azure-based VM infrastructure and production web services, performing monitoring, patching, and backup verification to ensure system reliability.
- Administered Microsoft 365, Intune, and Defender environments for 20+ users, handling endpoint enrolment and security policy deployment.
- Contributed to infrastructure planning and upgrades, identifying opportunities for efficiency and reliability improvements.
- Developed Python automation scripts to streamline data workflows, reducing manual processing time by over 90%.
- Supported CI/CD pipeline operations and coordinated with development teams to ensure smooth application deployments.
- Authored comprehensive technical documentation including maintenance guides, onboarding procedures, and operational runbooks.
- Liaised with internal teams and external service providers to coordinate works and ensure compliance with operational standards.

IT Customer Support

Feb 2021 – Jan 2022

Mama Enterprises — Kathmandu, Nepal

- Delivered first-line technical support via ticketing platform, diagnosing and resolving hardware, software, and network issues.
- Maintained detailed service records and escalated complex infrastructure issues to engineering and vendor teams.
- Authored internal knowledge-base articles and troubleshooting guides, reducing recurring issues and improving team response efficiency.
- Collaborated with vendors and contractors to coordinate equipment repairs and facility maintenance activities.

Projects

TfNSW Assistant — Real-Time Journey Planner (PWA)

github.com/thesumanshah/tfnsw-assistant

Built a production-grade progressive web application leveraging live transport data APIs, CI/CD pipelines, and service-worker caching for offline capability. Responsibilities included deployment automation, incident response, API integration, and technical documentation.

Library Management System (University Project)

Developed a full-stack web application featuring secure authentication, admin dashboard, and CRUD functionality with responsive UI and SQL database integration. Documented system architecture and operational procedures.

Education

Bachelor of Information Technology

Jul 2022 – Aug 2025

Crown Institute of Higher Education — Sydney, Australia

Technical Proficiencies

Operating Systems: Windows 10/11, Windows Server, Linux (Ubuntu), macOS, iOS

Cloud & Infrastructure: Microsoft 365, Azure VMs, Intune, Vercel

Security & Management: Microsoft Defender, Backup Verification, Patch Management, Endpoint Management

Languages & Tools: Python, PowerShell, JavaScript, SQL, Git, Docker, Zendesk, Jira

Networking: TCP/IP, DNS, DHCP, VPN Troubleshooting, Switch/Router Configuration

Documentation: Technical Runbooks, Maintenance Guides, Asset Records, Site Reports
